

Allen & Heath AHM-64 Audio Matrix Processor

ALLEN & HEATH

This 64x64 audio matrix processor is supported by an ecosystem of scalable I/O, control and Dante solutions. Its 96k Hz FPGA core audio engine delivers 8-band PEQ, gate, compressor and delay on all inputs as well as 8-band PEQ / 30-band GEQ, compressor, ANC, source selector, limiter and delay on all zone outputs. The AHM-64 System Manager software's slick GUI makes creating powerful audio systems a breeze, with no third-party programming or certified training needed. A SLink port offers plug-n-play connection to up to eight remote expanders from A&H's extensive Everything I/O range, including wall-mount, rack and portable options. With up to 268 routable system I/Os, AHM-64 handles projects ranging from simple P.A. speaker management to complete connected venues.

BASSBOSS The Kraken

With The Kraken - legendary monster of the deep, you're gonna lose your ship! At BASSBOSS, we believe sound systems should do more than make sound, they should make moving experiences from music! The Kraken will move your audience, literally. Featuring four 21" long-exursion woofers powered by 8,000W RMS of power and able to deliver immense output at the lowest frequencies humans can hear, the Kraken redefines "Volume." There's simply nothing that can deliver more bass volume from less physical volume. Delivering ± 3 dB response from 22 Hz - 100 Hz and capable of 150 dB peaks, this monster makes very big waves. (Obedient on dry land.)

BASSBOSS The Kraken

At BASSBOSS, we believe music should be a moving experience... just not furniture moving! The BB15, our "Baby 15" is very cute and small and easy to move, so you can move your audience without a moving truck. The BB15 has a very deep voice for its small size. Measuring 21x17x24", it provides ± 3 dB response from 40 Hz - 100 Hz. It outperforms much bigger competitors because it has a 2,400W RMS amplifier with DSP and a very robust, long-exursion, 4" voice coil, neodymium motor, 15" woofer. At 70 lbs, this baby's a pleasure to take to gigs... (No babysitter needed!)

DiGiCo Quantum 338 Digital Console

The next-gen Quantum 338 console is based on seventh-generation FPGAs offering 128 input channels, 64 aux/subgroup buses and a 24 x 24 matrix — all with full channel processing at 48k or 96k Hz. Also standard are three bright, high-resolution 17-inch multi-touch screens, 70 individual TFT channel displays and 38 100mm touch-sensitive motorized faders, along with "Ultimate Stadium" 32-bit ADCs/DACs and mono/LR/LCR/LCRS/5.1 master buses. Onboard DSP includes 286 dynamic equalizers, up to 24 stereo effects with floating-point reverbs and delay/chorus/pitch/enhancer and Mustard and Spice Rack processing.

Harrington Hoists HSDLB Standard Duty Lifting Beam

Harrington Hoists, Inc. introduces its HSDLB Standard Duty Lifting Beam, which is designed for low-headroom applications. Model HSDLB is available from half- through 40-ton capacities with outside spreads from 3 to 30 feet. Additional sizes and capacities are also offered. To minimize wear, the HSDLB's precision-machined bail provides a secure connection between the saddle of the hook and the upper radius of the bail. Three standard lift points for load adjustment are included and it includes a pair of heavy-duty swivel hooks. Additional lift points and hardware are optional. All HSDLB Standard Duty Lifting Beams are proof-tested to 125% capacity.
